

## SDR-RF 240B Module

SDR-RF 240B module is a low power and high performance RF transmitter-receiver solution designed for operation in S-band centered at 2.45 GHz. It is intended to interface with the processor module SDR-PM 402, which functions as a micro controller, processor and power management with a 24-pin flat flex cable (FFC) to form a standalone system.

Typical output power of the transmitter channel is 22 dBm. Single-ended SMA female connectors are installed for easy connection to antennas.

The receiver has an overall 2.8dB low noise figure with two stages of low-noise amplifier and exceptionally linear response with a flat gain of 30dB.

The ability of wide-range frequency-tuning makes the RF module ideal for applications from unlicensed ISM band (2.400-2.500 GHz) to high-resolution wide-band.
