

## SDR-KIT 2400AD Module

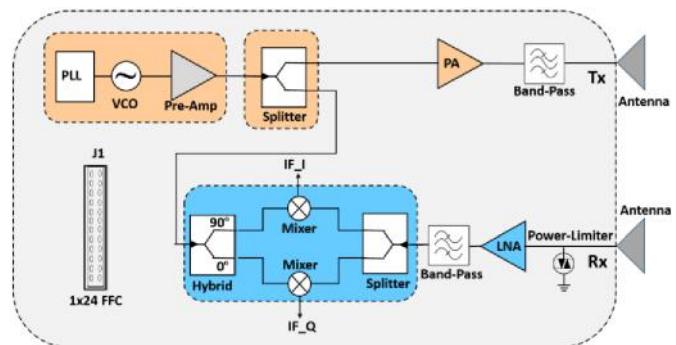

SDR-KIT 2400AD is an advanced low power and high performance RF transmitter-receiver implemented with Fractional-N Phase-Locked Loop (PLL) to achieve linearity of frequency modulation, enhance performance of target detection, and improve range resolution. It is intended to interface with the processor module SDR-PM 402, which functions as a micro controller, processor and power management with a 24-pin flat flex cable (FFC) to form a standalone system.

Typical output power of the transmitter channel is 16 dBm. Single-ended SMA female connectors are installed for easy connection to antennas. The receiver has an overall 6.4dB low noise figure with two stages of low-noise amplifier and exceptionally linear response with a flat gain of 28dB.
