

## SDR-KIT 2400AD2

SDR-KIT 2400AD2 is an advanced low power and high performance dual receiving-channel radar system. The RF transmitter-receiver module is implemented with Fractional-N Phase-Locked Loop (PLL) to achieve linearity of frequency modulation. Dual receiving channel is for dual receive antenna (DRA) radar mode, displaced phase center antenna (DPCA), and radar interferometry.

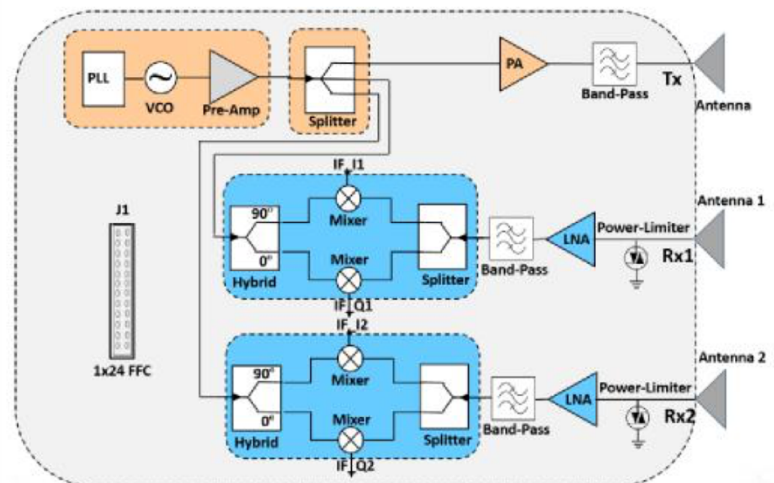

The RF module of SDR 2400AD2 is designed to interface with the processor module SDR-PM 404, which functions as a micro controller, processor and power management with a 24-pin flat flex cable (FFC) to form a standalone system.

Typical output power of the transmitter channel is 16 dBm. Single-ended SMA female connectors are installed for easy connection to antennas. The receiver has an overall 6.4dB low noise figure with two stages of low-noise amplifier and exceptionally linear response with a flat gain of 28dB.
